

# PolySpring Royal Air

## Memory Gel

### TECHNICAL FEATURES :

The Memory Gel is the latest revolution of Memory Air, studied in the Golden Night Research and Development laboratories. Memory Gel is a viscoelastic, water-based, super breathable and with antibacterial properties, which allows for a high air recirculation and a consequent dispersion of water vapor. The Memory Gel contains micro-particles of gel that promote thermo-circulation, maintaining a constant temperature of the mattress and helping your body to enjoy a rewarding rest.

RECOMMENDED FOR...: Thanks to its cellular composition, Memory Gel is indicated for those who sweat excessively during the night ensuring a dry sleep. Thanks also to its elasticity, Memory Gel is fully adaptable to the physical form, reducing the pressure points. It promotes perspiration and blood circulation. In addition, the Memory Gel has an anti-mite action, is hypoallergenic and is OEKOTEX certified (certificate of suitability for contact with the skin of infants).

## Poly Spring

The Poly Spring range introduces the innovative concept of the "metal free" mattress, which is completely metal free. During the day the body is in constant contact with electrostatic charge sources. In order to ensure a good rest it is necessary to eliminate excess tensions, avoiding contact with additional source charges. The revolutionary idea, fruit of the Golden Night laboratories, is the use of independent springs, made from Ergo Foam or Air Foam, which support the body gently working from the heart of the mattress. The elasticity and the density of the materials used for this purpose, ensure the ergonomics typical of classic pocket springs, but excluding any accumulation of static electricity and magnetic charges.

## Air Foam

TECHNICAL FEATURES: Air Foam is a polyurethane foam cell exploded with long-lasting resilience compared to conventional foams. Other important characteristics of this material are its drainage system and effective anti-mite and anti-mold actions.

RECOMMENDED FOR...: The Air Foam allows air ventilation without equal and a consequent dispersion of water vapor and moisture. Thanks to its cell structure explosion, the air passes through the mattress leaving it dry and comfortable. The Air Foam is suitable for those who suffer from excessive sweating during sleep ensuring a dry rest. The Air Foam is suitable for all weather conditions, giving the body the right amount of heat for a deep and relaxed sleep. The Air Foam is hypoallergenic, anti-mite and is equipped with certified OEKOTEX.
