

Eddy

Alain Gilles

The Eddy armchair is built using the same logic as bicycle construction, around a tubular metal frame, while the seat is designed to be comfortable and ergonomic. The way in which the various parts of the frame are connected - using “quick release” fittings - is an obvious reference to the cycling world. The use of separate elements to make up the frame of the armchair makes it possible to play with the graphics and thus create multiple combinations of different colours and finishes. The armrests can be embellished with side pockets which are useful for storing books and magazines or to keep remote controls within easy reach. Eddy is available with (Eddy up) or without (Eddy) a headrest.
