

design: Piergiorgio Cazzaniga, 2003

Chair with mould bended aluminium seat. Thanks to its characteristic cuts, the aluminium plate bends both across width and length senses, assuming a comfortable and resistant shape. The base, with four legs or with central swivel leg, is made in chromed metal.

## FINISHES

Glossy lacquered in white, black or red, or with the internal side coated with red or grey felt and external side in polished aluminium.

## TECHNICAL CHARACTERISTICS

- **BODY:** Moulded sheet aluminium coated with three layers of paint: epoxy primer, coloured enamel and a final clear varnish for protection or in polished aluminium.
- **4-LEGGED BASE:** Chrome-plated structure made from bent, welded tubular steel.
- **CENTRAL TURNABLE BASE:** Painted iron tank coated with a moulded stainless steel cover; stainless steel support tube with hostaform bush. Chrome-plated, moulded and welded steel support and rotating bracket.

## MAINTAINANCE AND CLEANING

- **VARNISHED PARTS:** gently rub down with a damp cloth (water + neutral soap). Do not use alcohol or detergents.
- **STEEL PARTS:** polish with a cloth dampened with water and immediately wipe with a dry cloth. Do not use brushes or sponges made of steel or scratchy materials.
- **BRUSHED PARTS:** The body must be cleaned by hand; the crafted nature of this finish makes this product unique and unrepeatable. We recommend cleaning regularly with a damp cloth, following the direction of the grooves in the body. NEVER use abrasive materials or substances and avoid rubbing against the direction of the brushing.

## PRECAUTIONS

- Our company does not respond for damage caused by improper use of the chair, such as standing with feet on the seat, sitting or climbing on the back, using the chair as a ladder.
